

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Project Title:

Domain: Travel and Hospitality Platform (Beyond Booking).

Problem Statement: Travel partner and Vendor Coordination Platform.

Introduction

1. Purpose

The purpose of this system is to improve coordination between travel partners, vendors, and tour guides within the travel and hospitality domain. The platform aims to reduce communication gaps and support efficient trip management beyond basic booking functionality.

2. Scope

The Travel Partner & Vendor Coordination Platform focuses on:

- Managing vendor service coordination
- Assigning tour responsibilities
- Providing real-time updates
- Handling issues during trips
- Supporting smooth trip completion

This system emphasizes operational coordination rather than customer booking functionality.

Description

1. Project Perspective

The platform acts as a coordination layer connecting:

- Travel partners
- Vendors
- Tour guides
- Support executives

It enables structured workflows for managing travel services from planning to completion.

2. Actors:

a. **Traveler:** Views itinerary details and receives trip updates during the travel process.

b. **Travel Partner:** Plans trips, coordinates with vendors, and manages overall travel operations.

c. **Vendor:** Provides services, confirms availability, and sends service status updates.

d. **Travel Guide:** Conducts guided tours and shares progress updates during trip execution.

e. **Support Executive:** Handles issues and helps resolve coordination problems between stakeholders.

Functional Requirements

Trip Planning Phase

- Travel partner shall request vendor availability.
- Vendor shall accept or reject service requests.
- Travel partner shall assign tour duties.
- Vendor shall confirm availability.

Pre-Trip Preparation

- System shall allow sharing itinerary details.
- Traveler shall confirm trip plan confirmation.

Trip Execution Phase

- Vendors shall provide service updates.
- Tour guides shall provide guided tour updates.
- Travel partner shall check coordination status.

Issue Handling

- Users shall report problems.
- Support executive shall request coordination adjustments.
- Resolution updates shall be shared with stakeholders.

Trip Completion

- Vendors shall mark services completed.
- Tour guide shall mark tour finished.
- Completion message shall be sent.

Non-Functional Requirements

1. Performance

- The system should process service requests and coordination updates within a few seconds under normal usage.
- Real-time notifications between travel partners, vendors, and tour guides should be delivered without noticeable delay.

2. Security

- User authentication should be secure.
- User data should be protected.

3. Usability

The interface should be simple and easy to understand for all user roles.

4. Reliability

The system should work without frequent failures.
